

MAEG4060 Stage 2 Development Report

Names & IDs:

- **Guo Tsun Hei (1155186272):** 3D Modeling, Texturing, Rigging, and Animation
- **Yim Fu Chong (1155176974):** Programming, Physics Engine, and System Integration

1. Landscape Model

The landscape will be generated programmatically using a heightmap. The heightmap asset has been finalized.

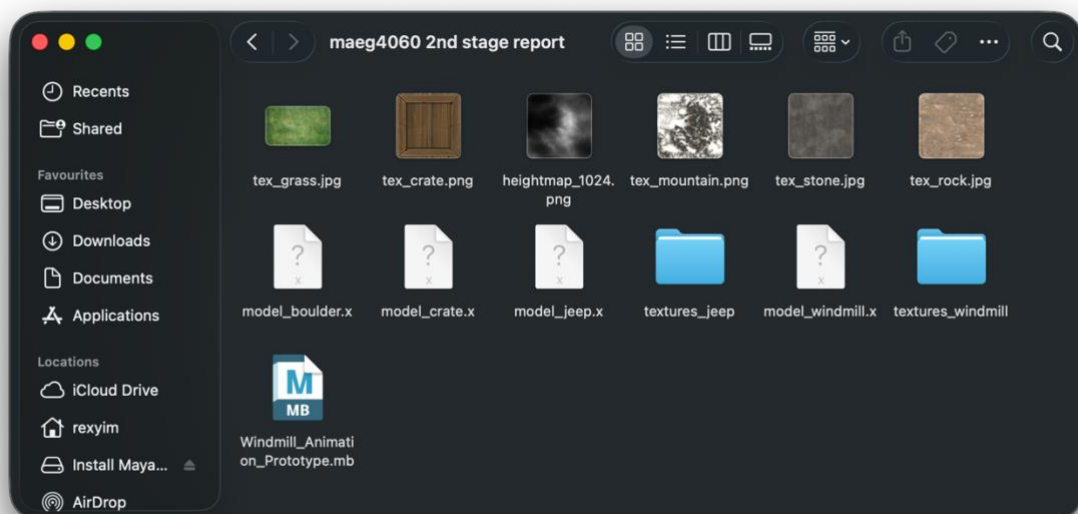

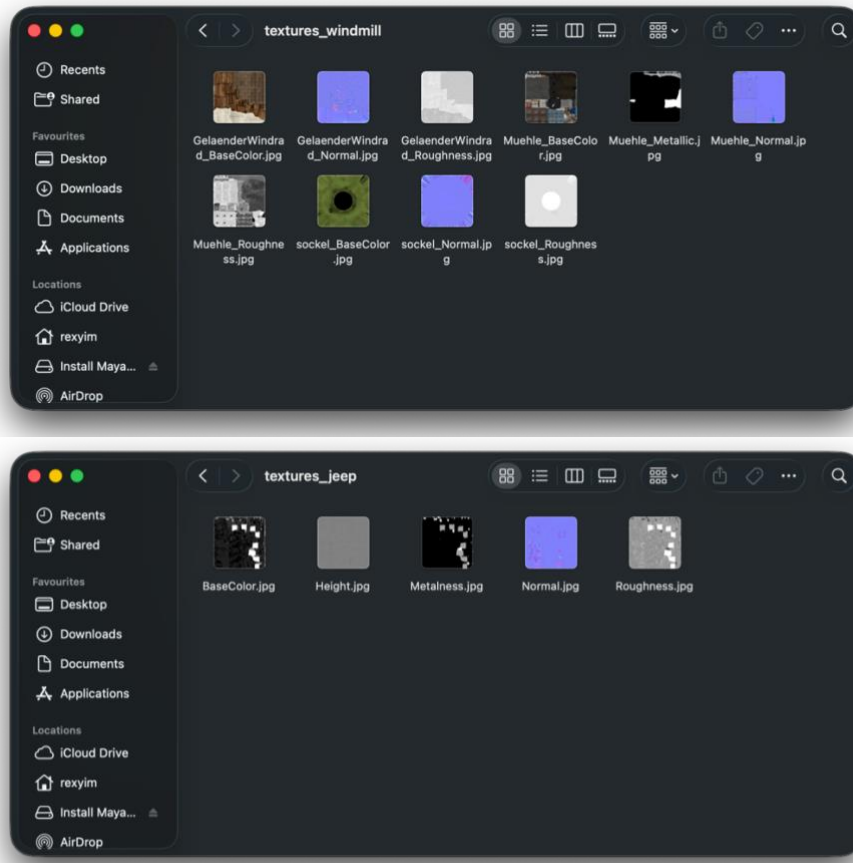

(screenshot of the tex_mountain.png and heightmap_1024.png image)

2. 3D Models and Textures

All required static and controllable models have been acquired, textured, and successfully converted into the DirectX compatible .x format.

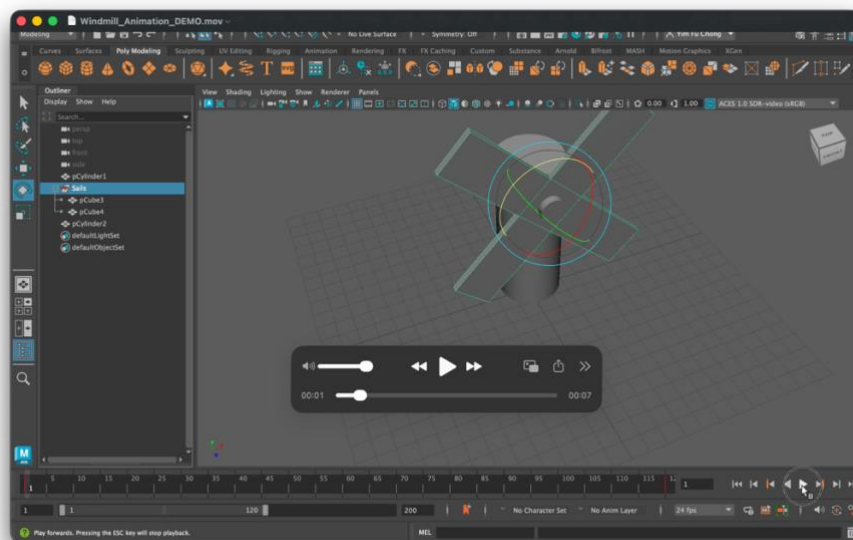

Files included in submission:

3. Model Animation (Maya)

To satisfy the animation requirement, the rotational animation for the Windmill was keyframed inside Autodesk Maya. The hierarchical structure allows the engine to parse the animation frames for playback.

(screenshot of Maya, the timeline is visible!)
